

DAYTON

BESCHRIJVING

The first thing you notice about the Dayton is the use of two separate cushions in the back. This is even more noticeable because of the light, leather upholstered chrome arms. The two back cushions have different densities for optimal comfort. The model is available with the different mechanisms. The headrest is adjustable. The seat is fitted with zig-zag metal springs. The leather is finished in saddler stitching. Available with a metal star base or leather of wood disc foot.
